MAHARASHTRA STATE BOARD OF TECHNICAL EDUCATION

GOVERNMENT POLYTECHNIC, JALGAON
(0018/1567)

Program Name and Code **:** Computer Engineering (CO5I)

Course Name and Code **:**Client-Side Scripting Language (22519)

Academic Year **:** 2022-23

Semester **:** Fifth

A MICRO PROJECT
on
Derma Skincare Website

Submitted on December by the group of 4 students

Sr. No.	Roll No.	Name of student	Enrollment No.	Seat No.
1	010	Ajay Ramdas Dandge	2000180464	306231
2	013	Nikita Mahesh Kurkure	2000180467	306234
3	059	Dnyanda Vikas Gogate	2000180519	306280
4	076	Chinmayee Rajendra Lokhande	2000180538	306297

Project Guide:-
Vinita Patil Ma'am

MAHARASHTRA STATE BOARD OF TECHNICAL EDUCATION

Certificate

This is to certify that Students of **CO5I (Ajay Dandge, Nikita Kurkure, Dnyanda Gogate, Chinmayee Lokhande)** Roll No. **10, 13, 59, 76** of 5th Semester of Diploma **Computer Engineering_**of Institute, **Government Polytechnic, Jalgaon (Code:0018/1567)** has completed the **Micro Project** satisfactorily in the Subject –**Client-Side Scripting Language (22519)** for the Academic Year **2022-23** as prescribed in the curriculum.

Place :**Jalgaon** .

Date: / /2022

Subject Teacher **Head of the Department** **Principal**

Seal of Institution

GOVTERNMENT POLYTECHNIC

JALGAON

-SUBMISSION-

We the students of **CO5I-4(Ajay Dandge, Nikita Kurkure, Dnyanda Gogate, Chinmayee Lokhande) Roll Nos. 10, 13, 59, 76** as students of **5th** Semester of the Programme **Computer Engineering** humbly submit that we have completed from time to time the Micro-Project work as described in this report by our own skills and study between the period from SEPTEMBER 2022 TO DECEMBER 2022 as per instructions/guidance of **Vinita Patil Ma'am** And that following students were associated with me for this work, however, quantum of my contribution has been approved by the Lecturer.

And that we have not copied the report on its any appreciable part from any other literature in contravention of the academic ethics.

Date: / /2022

Part A: A micro-project proposal

Derma Skincare Website

1.0 Aims/Benefits of the micro project

Aim of the project is website of skincare products **Derma Care** . It teaches you how to deal with events, manipulate the DOM, handle user input, give feedback to the user and keep track of their score (for example, using client-side storage)

2.0 Course outcome addressed.

1. Create interactive web pages using program flow control structure.
2. Implement Arrays and functions in Java script.
3. Create event-based web forms using Java script.
4. Use JavaScript for handling cookies.
5. Create interactive webpage using regular expressions for validations.
6. Create Menus and navigations in web Pages.

3.0 Proposed methodology

We have started the project by collecting the essential information about Products. After that we created html files to display text on screen and then we created CSS file for styling the webpage and then added JavaScript to make it interactive.

4.0 Action Plan

Sr. No.	Detail of activity	Plan start date	Plan finish date	Name of responsible team members
1	Group discussion	15-9-2022	18-9-2022	1) Ajay Ramdas Dandge 2) Nikita Mahesh Kurkure 3) Dnyanda Vikas Gogate 4) Chinmayee Rajendra Lokhande
2	Searching of real-life task	19-9-2022	21-9-2022	
3	Selection of micro project topic	22-9-2022	23-9-2022	
4	Gathering of information and application of it	24-9-2022	26-9-2022	
5	Group discussion	27-9-2022	28-9-2022	
6	Distribution of work to be done	29-9-2022	30-9-2022	
7	Preparing the overview of the	1-10-2022	3-10-2022	

	project			
8	Gathering the details	4-10-2022	8-10-2022	
9	Preparing rough analysis of the project.	9-10-2022	15-10-2022	
10	Study of each networking Device.	16-10-2022	29-10-2022	
11	Preparing the Configuration/ Installation Steps.	30-10-2022	2-11-2022	
12	Group discussion	3-11-2022	9-11-2022	
13	Gathering the data	10-11-2022	20-11-2022	
14	Working on connection diagrams.	21-11-2022	25-11-2022	
15	Finalizing diagrams	26-11-2022	30-11-2022	
16	Preparing report	1-12-2022	10-12-2022	

5.0 Resources used

Sr. no.	Name of resource material	Specifications	Quantity
1	PC	Laptop with 4GB RAM Processor:- Intel Core i3 7020U	1
2	Operating System	Windows 10 Home Single Language	1
3	Software	Visual Studio, Chrome ,XAMPP ,Sublime Text Editor.	4

PART-B Micro-Project Report

Derma Care Website

1.0 Rationale

Prepare a Derma Care Website in Javascript

2.0 Aim/Benefits of the micro-project

Aim of the project is it teaches you how to deal with events, manipulate the DOM, handle user input, give feedback to the user and keep track of their score (for example, using client-side storage)

3.0 Course Outcome Addressed

1. Create interactive web pages using program flow control structure.
2. Implement Arrays and functions in Java script.
3. Create event-based web forms using Java script.
4. Use JavaScript for handling cookies.
5. Create interactive webpage using regular expressions for validations.
6. Create Menus and navigations in web Pages.

Teachers Evaluation Sheet

Name of student: Ajay Dandge, Nikita Kurkure, Dnyanda Gogate, Chinmayee Lokhande

Enrollment number: 2000180464, 2000180467, 2000180519, 2000180538

Name of Project: Derma Care Website

Course Title: Client-Side Scripting Language

Code: 22518

Course outcome achieved:

1. Create interactive web pages using program flow control structure.
2. Implement Arrays and functions in Java script.
3. Create event-based web forms using Java script.
4. Use JavaScript for handling cookies.
5. Create interactive webpage using regular expressions for validations.
6. Create Menus and navigations in web Pages.

Evaluation as per Suggested Rubric Assessment of Micro Project

Characteristic to be assessed	**Poor (Marks 1-3)**	**Average (Marks 4-5)**	**Good (Marks 6-8)**	**Excellent (Marks 9-10)**
Relevance to the course				
Literature Review/ Information collection				
Analysis of Data and Representation				
Completion of the target as per project proposal				
Report preparation				
Presentation of the Micro project				

Micro-Project Evaluation Sheet

Process and Product Assessment (6 marks)	Individual Presentation/Viva (4 marks)	Total Marks (10 marks)

Abstract

A large number of cosmetics formulations have been developed based on herbs. Indian women have been using herbs such as sandalwood, aloe for skincare protection, since ages. In India, the rich cultural heritage is behind the materials used in cosmetics from the earliest period of medical and cosmetic art. Continuous application of synthetic compounds on the skin causes many adverse effects such as skin irritation, allergy, discoloration, rashes along with skin cancer. The aim of this is to explore herbs for different skincare needs. A literature search was done on various herbs used for skin nourishment, cleansing, sun-screens, bleach, anti-aging, moisturization and other skin reqirements.

Introduction

Nowadays demand for cosmetics has increased. And there is best scope in cosmetics industry. So, we decided to make website on cosmetics or skincare products. Products from all over the world with best brands are included in our website. We mostly give focus on natural skincare products. We provided a questionnaire for users to give them suggestions of the products that suits their skin type, gender, age or we will also suggest products if you have any allergy. We are working for your best. In this project we have made the website of skincare products called Dermacare.

Dermacare is the site where you can get skin friendly products by a questionnaire or you can buy any of the all products. Our skin is the very essential part of our body and it is our duty to take care of it. So here we are with the amazing natural skin products. The motto of ours is to provide you the best quality product.

JavaScript:

JavaScript is a cross-platform, object-oriented scripting language used to make webpages interactive (e.g., having complex animations, clickable buttons, popup menus, etc.). There are also more advanced server-side versions of JavaScript such as Node.js, which allow you to add more functionality to a website than downloading files (such as real-time collaboration between multiple computers). Inside a host environment (for example, a web browser), JavaScript can be connected to the objects of its environment to provide programmatic control over them.

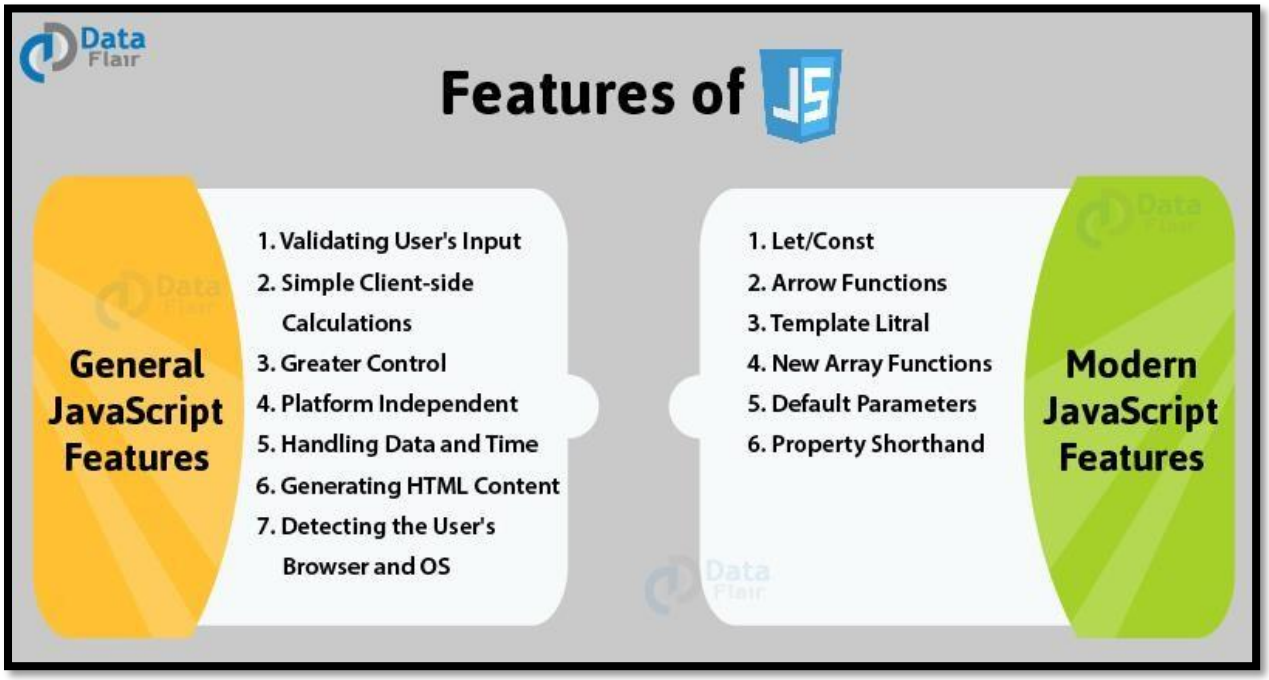
JavaScript contains a standard library of objects, such as Array, Date, and Math, and a core set of language elements such as operators, control structures, and statements. Core JavaScript can be extended for a variety of purposes by supplementing it with additional objects; for example:

- **Client-side JavaScript** extends the core language by supplying objects to control a browser and its *Document Object Model* (DOM). For example, client-side extensions allow an application to place elements on an HTML form and respond to user events such as mouse clicks, form input, and page navigation.
- **Server-side JavaScript** extends the core language by supplying objects relevant to running JavaScript on a server. For example, server-side extensions allow an application to communicate with a database, provide continuity of information from one invocation to another of the application, or perform file manipulations on a server.

This means that in the browser, JavaScript can change the way the webpage (DOM) looks. And, likewise, Node.js JavaScript on the server can respond to custom requests from code written in the browser.

Features Of JavaScript

JavaScript is divided into two main features; they are as follows –



- **General JavaScript Features**

JavaScript language consists of several different features. Some of the general JavaScript features are as follows –

1. Validating User's Input

JavaScript is very useful while using forms. It has the capability to validate user input for errors and also saves time. If the user leaves a required field empty or the information is incorrect, JavaScript checks for them before sending the data over to the server.

2. Simple Client-side Calculations

Since JavaScript is a client-side technology, it can perform basic calculations on the browser. The browser does not need to ask server time for every task. This is especially helpful when a user needs to perform these calculations repeatedly. In these cases, connecting to the server would take a lot more time than performing the actual calculations.

3. Greater Control

JavaScript provides greater control to the browser rather than being completely dependent on the web servers. JavaScript provides various browsers with additional functionalities that help reduce server load and network traffic.

4. Platform Independent

Since browsers interpret JavaScript, it solves the problem of compilation and compatibility. Thus, it can run on Windows, Macintosh, and other Netscape-supported systems. Also, it is possible to embed them in any other script like HTML that keeps JavaScript into use.

5. Handling Dates and Time

Unlike other programming languages, JavaScript has built-in functions to determine the date and time. Thus, it is very easy to code only by using methods like **.getDate().**

6. Generating HTML Content

JavaScript has very handy features to dynamically generate HTML content for the web. It allows us to add text, links, images, tables, etc after an event occurrence **(e.g. – mouse click).**

7. Detecting the User's Browser and OS

JavaScript is very capable in the detection of the user's browser and OS information. Though JavaScript runs on every platform, there may occur a situation where we need the user's browser before processing. This can be helpful for writing code that results in different outputs in different browsers.

- **Modern JavaScript Features**

If we dive into some more recently added features of JavaScript that makes it unique from other programming languages. There are a lot more modern features of JavaScript invented after some general features. Some of them are as follows –

1. Let/Const

JavaScript has introduced the keywords **'let' and 'const'** that are available to replace **'var'**. Unlike 'var', they are important due to their blocked scope i.e we can only access them in the block we defined them in. Whereas 'var', even if we initialize it inside a function, we can access it outside of the function.

2. Arrow Functions

These functions are very useful in simplifying the syntax and tamp down the lines of codes for the web page or web application. Since these are light-weight in syntax, they can be very easily used in anonymous **functions in JavaScript.**

3. Template Literal

This is a common feature in other programming languages that allows you to save variables directly into strings. This proves to be an important tool for developers as it permits them to focus more on the development of the application rather than spending the time on syntax.

4. New Array Functions

Though array functions are not necessary for any programming language, they do simplify things for the developer. This also compacts the code and makes it much easier to understand. A regular array and an associative array, JavaScript supports them both. While a regular array contains integer values for its index, indexes can be strings for an associative array.

5. Default Parameters

This JavaScript feature helps to avoid collapsing the whole code for a simple mistake. It is very useful when the developer needs to check the working of a function without any parameters.

6. Property Shorthand

Built-in methods like **.get()** are available for the developer's use. These methods help avoid writing the same code every time and cut back on various lines of code. These inborn methods are really supportive of cutting back the developing time and cost.

Applications of Javascript:

JavaScript is mainly used in the following:

1. Websites

JavaScript lets you add **behaviour** to the web page where the page responds to actions without loading a new page to request processing. It enables the website to interact with visitors and execute complex actions.

2. Web Applications

As browsers and personal computers have continued to improve, JavaScript gained the ability to create robust web applications. Consider applications like Google Maps. If you want to explore a map in Google Maps, all you have to do is click and drag with the mouse. You will see the part of the map that is less detailed and then fills itself in. That's the work of JavaScript behind the scene.

3. Presentations

A very popular use of JavaScript is to create presentations as websites. Using the Reveal.js framework, this becomes really easy if you are familiar with HTML and CSS.

4. Server Applications

With the advent of Node.js a few years ago, JavaScript made its way from the browser into the server. Since then, Node is adopted by major companies such as Wal-Mart, as a key part of back-end infrastructure.

5. Web Servers

You can create much more robust servers using Node or the standard server application framework Express.js. Many of the previously mentioned Nodes are actually built using MEAN stack (Mongo Express Angular Node) of which Express is the key component.

6. Games

While the browser hasn't been the traditional games platform in the past, recently it has become robust for games. Additionally, with the addition of HTML5 canvas, the level of complexity that is possible in the browser-based games has increased exponentially. There are even browser games that teach us programming.

7. Art

One of the new features of HTML5 specification is the canvas element, which allows the browser to render three-dimensional spaces. This helps to open the browser as a new source for digital art projects.

8. Smartwatch Apps

Popular smartwatch maker Pebble has created Pebble.js, a small JavaScript framework that allows a developer to create an application for the Pebble watches in JavaScript.

9. Mobile Apps

One of the most powerful things you can do with JavaScript is to build an application for non-web contexts.
That's the other way of saying that you can make apps for things that are aren't on the internet.

For example – Mobile devices are now the most popular way to access the internet. What this means is all of the websites should be responsive. The catch is that the mobile app comes in two major applications, Apple and Android. And those applications are written in completely different languages.

10. Flying Robots

Yes, you read that right. Several commercially available quadcopters, some outfitted with a simple OS, make it possible to install Node.js. This means that you can program a flying robot with JavaScript. JavaScript is the most accessible programming language on this planet, having many features. So, it's good to see that it is creating such a wide range of applications.

Process:

In this project we have created a Derma Care Website using HTML , CSS and Javascript. To create this project, we have used eight files, six files of html , one CSS file and one file of JavaScript.

HTML Files:

1) dermacare.html: Displaying starting window of website
2) menu.html: Displays all products of website
3) launch.html: Displays new launches of website
4) search.html: Search the products mentioned in the website
5) suggest.html: Displays the products suitable according to you
6) sign.html: Displays sign in page

CSS File:

1) style.css: for styling the search page

JavaScript File:

1) script.js

At first when we open the website, we can see information related to our skin at the left of the page and we have a form for user to get suggestions of products suitable for their skin at right one. After submitting the form user go to the page that suggests products for their skin type. Then we provided go back button to return at home page. And there on the top we can see various options like Products, New Launches, Search and Sign In.

When we click on Products, we can see all the products and we provided pagination for ease that user can directly go to the next page or previous page or you can directly access any of the page without taking efforts of scrolling.

Next by clicking on New Launches you can see the new launched products and you can easily access them. Then by selecting Search you can search for the product you want and we provided various filters like All, Face Cream, Face Oil, Serum, Moisturizer, Tonic, Clay, Cleanser, Face Mask. By default, after opening the page we can see all the products but if you want to see particular product then you can either do it by typing in a search box or can select various filters and it will filter you the products you want.

Now last but not the least when you go to the Sign in page you are provided a box for signing up or login with Google if you have already created an account on our site.

Beauty and Skincare
Skincare is Important
The items you use are only as excellent as your skincare routine. While high-quality cosmetics might make your skin appear better now and in the future, low-quality ones can be useless and harmful.
There are several products on the market that may be included in your skincare routine to meet your demands. Discover yours! There are products available for oily, dry, or combination skin. It depends on what you need.
@dermacare
Hey! Welcome to DermaCare
Fill the below form to know which products are suggested to your skin. We'll suggest you the best products of ours.
1. What is your gender?
Male
Female
Other
2. What is your age?
18
3. How regular do you use cosmetic products?
twice a day
4. What is your skin type?
dry skin
5. Would you use a skin care product if you have any known allergies?
Yes
No

Literature Survey

In this project we have made the website of skincare products called Dermacare. Dermacare is the site where you can get skin friendly products by a questionnaire or you can buy any of the all products. Our skin is the very essential part of our body and it is our duty to take care of it. So here we are with the amazing natural skin products. The motto of ours is to provide you the best quality product.

Future Scope

The cosmetic market in one of the fastest growing industries in the world. The pace for growth is set by Asia, generating up to 35% sales in this market segment. Global cosmetics sales have been increasing by 6-7% annually thanks to the rising level of hygiene standards and growing consumer awareness, accompanied by increased distribution.

Conclusion

We have learnt various things while building this website. We learnt how to take user inputs. We learnt various new concepts in CSS, HTML as well as JavaScript and one more thing that we learnt from this project is functions and branching conditions. We learnt to apply various validations to the project. We all enjoyed making this project.
